Agricultural cooperatives

Why does a cooperative need an OMS?

Optimise the flow of heterogeneous & complex stock

Improve & standardise the cooperative's order management processes

Improve farmer experiences with useful services like Click and Collect in 2 hours

Serving farmers through greater operational efficiency

Agricultural cooperatives have unique stock challenges: a wide range of products – tens of thousands of references – from fertilisers and equipment to livestock, with different weights, volumes, hazards and logistical constraints.

Distribution is equally complex. Cooperatives operate many sales channels (technical sales staff, physical shops, e-commerce platforms, dedicated portals), stock points (shops, warehouses, factories, suppliers, external sellers), unloading methods (tipper, crane, flatbed) delivery services (standard, express, urgent Click & Collect or home delivery), and carriers with their own specificities and constraints.

An OMS simplifies, automates and optimises stock and order management in such an environment, benefitting both the cooperative, which will improve sales, support and logistics operations, and its members, through greater product availability and faster order fulfilment and returns, whatever sales channel they choose.

Trusted by industry leaders

TERRENA

Key features of OneStock OMS

Stock unification

Selection of best stock points & carriers

Centralisation of orders

Delivery Promise optimisation

The benefits for agricultural cooperatives:

30%

of sales via e-commerce platform

Greater product availability with Ship from Store

Reliable and precise delivery times via the Delivery Promise

More efficient customer service thanks to centralised order information

Focus on OneStock OMS

Inventory visibility
Accurate, real-time information about the availability and location of stock across your network.

Omnichannel customer experience
Consistent shopping experiences for customers based on reliable delivery promises.

Analytics & reporting
KPIs to identify growth opportunities and improve operational efficiency.

Order orchestration
Algorithms ensure order processes are tailored to specific customer and business needs.

Returns management
Multiple return options to meet all customer needs, regardless of the sales channel used to place the order.

Advanced Ship from Store
Leverage your network of physical stores to enable rapid omnichannel order fulfilment.
